

Dural Decoupling Matting

(for use with Harmoni SmartFlex)

Dural Durabase CI-FH is a decoupling matting that doubles as a carrier for electric underfloor heating cables. It speeds up the installation as there is no need to lay uncoupling matting then underfloor heating mats separately. The matting can also protect the cable from potential trowel damage while embedding in adhesive or self-smoothing screed. The matting is available in rolls of 1m, 5m and 15m lengths.

KEY FEATURES

- Decoupling carrier matting for use with Harmoni Flex
- Quick & easy to install
- Protects cables
- Heating cables can be positioned where the heat is required in the room.
- Low height matting is just 5mm thick.

APPLICATION

Dural Durabase is ideal for use with Flex cable. The raised studs act as a measuring tool, ensuring the cables are the correct distance apart and allows cables to be positioned where the heat is needed in the room. The matting also absorbs the stresses and pressure caused by underfloor heating, helping to prevent cracked tiles.

DURAL SEALING AND JOINING TAPE

Durabase sealing tape for WP+ CI++ mats for matting junctions and sealing wall and corner junctions.
